EXPERIENCE

Cribl Inc, Remote (CT)

Staff Site Reliability Engineer

Jan 2025 - Present

- Designed and deployed an internal ALB, implemented AWS WAF Rules and Centralized WAF logging for staging and production. This eliminated per-organization drift and manual setup steps, reducing overall deployment process by approximately 20-30 minutes
- Led a FedRAMP Epic to enable DNS over HTTPS for all resources defined within the FedRAMP Boundary. This was a collaborative project I led. I personally tackled the per-org instances and setting up the appropriate Route53 Resolver Endpoints. Deployed using both Terraform and Ansible. This allowed us to achieve and comply with the FedRAMP SC-8(1) control.
- Developed and deployed custom in house Incident Management Slack bot for our FedRAMP environment to decrease overall cognitive load and our average time to start incident investigation and mitigation by approximately 80%. Written in Typescript and deployed into Kubernetes (EKS) using Helm and Github Actions.
- Pre-FedRAMP work to ensure we are leveraging appropriate TLS Policies for all Load Balancers and Migrated ALL S3 Buckets with "dots" into "dashes" to be FIPS compliant. This required new S3 buckets appropriately named and full migration of data from old to new buckets.

2U Inc, Remote (CT)

Site Reliability Engineer Lead

Apr 2023 - Jan 2025

- Automated AWS ACM certificate renewal with Lambda, triggered by EventBridge. Leverages Terraform & GitOps (Atlantis) for infrastructure management and Python3/boto3 for the Lambda Function reduced PM productivity by 20%
- Led the migration of existing infrastructure from London to Ireland regions within AWS, collaborating with vendors and achieving a seamless transition. Utilizes Terraform & GitOps (Atlantis) for infrastructure management
- Contributed technical expertise to enable Github Runners integration with Kubernetes for container scanning. Scans run via Github Actions, runners exist in Kubernetes using [ARC \(actions-runner-controller\)](#) allowing us to meet PCI compliance
- Developed junior CloudSec engineers' proficiency in tooling by fostering best practices and knowledge sharing.
- Lead team of 4+ engineers (global)
- Consolidated AWS IAM login processes for all engineering teams to have a unified login approach
- Host pairing sessions with junior/mid level engineers to assist with project completion and personal growth.

SKILLS

- Ansible
- Atlantis
- AWS
- Bash
- Jenkins
- Kubernetes
- Typescript
- Puppet
- Python
- Terraform
- Incident Response and Management

Flashpoint, Remote (CT)

Senior Staff Site Reliability Engineer

Aug 2022 - Apr 2023

- Provided one-on-one guidance and support to junior SREs as they tackled challenges in their daily work.
- Spearheaded organization-wide incident response revamp, including defining protocols, training teams, and facilitating retrospectives, leading to a unified process.
- Automated monthly incident reporting for CTO/SVPs using Python, Pandas, Matplotlib, and Atlassian-python-api. Deployed the script as a Kubernetes CronJob, ensuring automated monthly reporting and timely information delivery to executives increasing overall visibility into incidents.
- Championed the adoption of an ADR process within the SRE team, leading to significant improvements in team satisfaction, productivity and roadmap planning. Increased overall roadmapping by 30%

2U, Inc., Remote (NC, CT)

Devops Engineer IV

Apr 2020 - Aug 2022

- Managed multiple EKS clusters including upgrades and assisting development teams with right sizing resources.
- Write automation tools to assist the team in decreasing repeat work, in effort to eliminate toil and improving velocity by 30%
- Led junior engineers, providing project guidance and mentoring.
- Improved team transparency 25% by modernizing documentation, utilizing Github Actions/Pages and [Material for MkDocs](#)

2U, Inc., Remote (NC)

Devops Engineer III

Dec 2014 - Apr 2020

- Designed and implemented Terraform modules, enabling developers to manage infrastructure as code independently.
- Contributed to the infrastructure modernization initiative by authoring and maintaining Ansible roles, replacing legacy Puppet configurations.
- Managed the move of a legacy environment to its own secure PCI compliant AWS Account. Worked collaboratively with developers to containerize the application and deploy.
- Designed and implemented learning resources for specific DevOps tools, boosting engineer comfort with IaC practices

EDUCATION

LI Drafting and Technical Institute, Amityville, NY

AOS Degree in Electronics/Computers

- Studied Operating Systems from Win 95 - Server 2003
- Studied Networking , DNS, DHCP, and Various Protocols.
